

Kasco Marine, Inc. is a manufacturer of Floating Fountains, Pond Aerators, Water Circulators, De-Icers, and Submersible Landscape Lights. We pride ourselves in making our products efficient, durable, and affordable. Our products are designed and manufactured in the U.S.A. to withstand the harshest marine environments throughout the world to give you many years of dependable performance. Let us put our 38+ years in designing and manufacturing marine agitation and aeration equipment to work for you and your body of water.

Our floating aerating fountains add class and beauty to any body of water. Kasco offers floating fountain models in 1/4, 1/2, 3/4, 1, and 2 horsepower sizes to accommodate a wide variety of pond/lake sizes. Light kits are available for all of our fountains to create a dramatic fountain display at night.

Kasco Pond Aerators, or High Oxygen Transfer Aerators, are the industrial strength model for the person looking for high oxygen transfer and water movement at an affordable cost.

Pond, lake, and water aeration in general is a key ingredient to a healthy pond. Added aeration provides living organisms the oxygen they need to live and thrive in your pond. The lack of needed aeration to a pond or body of water can create many problems, such as algae and aquatic plant problems. Kasco aeration equipment will improve the water quality, enhance the aesthetics, and increase your enjoyment of your pond or lake.
